EDITORIAL

President's Welcoming Words

Dr
**Salem
ABDESSALEM**

*President of
the Tunisian Society of Cardiology
and Cardiovascular Surgery*

On behalf of the Tunisian Society of Cardiology and Cardiovascular Surgery, it is my great pleasure to welcome you to our 2024 edition of our annual Congress of Cardiology. This prestigious event would not have been possible without the exceptional contributions of many individuals and organisations. I would like to extend my heartfelt congratulations to the Board members, the Scientific Committee, the twelve Working Groups, and the Heads of Cardiology Departments for their dedicated efforts in developing an outstanding program. Your hard work has culminated in a high-quality agenda designed to foster learning and collaboration.

I am particularly grateful to the Ministry of Health for accepting to place this congress under its esteemed patronage. Their commitment to the advancement of cardiovascular care in Tunisia, coupled with their support in facilitating the opening and awards sessions, reflects the strong partnership between the government and medical professionals in our shared mission to improve healthcare outcomes.

Tunisia, with its rich history, vibrant culture, and warm-hearted people, is honoured to host this international gathering. We are proud to welcome representatives from cardiology societies across four continents (Africa, Europe, Asia, America), fostering a global exchange of knowledge and expertise. It is a privilege to share with you the beauty of our country and the kindness of our people, who are eager to engage with you in a deep professional dialogue.

This 2024 congress follows a case-based learning approach, allowing for an interactive and dynamic exchange of experiences. It aims to enhance our collective understanding of cardiovascular care, with a particular focus on improving patient outcomes through a comprehensive continuum-from prevention and early detection to the most advanced interventions. Our goal is to ensure that this congress not only deepens our clinical expertise but also strengthens the bonds between our global cardiovascular community, united in our commitment to the well-being of patients and populations alike. The congress is for a wide spectrum of attendees (Fellows, cardiologists, interventional and CV surgery experts, Nurses, technicians, pharmacists...), dealing with basic aspects in wet lab heart dissection to complex aspects of heart assistance and transplantation.

I wish you a fruitful and enriching experience throughout this congress and look forward to the inspiring discussions and collaborations that will shape a better future of cardiovascular care.
